Developing / Porting WINC1500 Driver and Application Projects Host SAMA5D27

Related Jira for Development

WINC1500 - https://jira.microchip.com/browse/WSGTEST-1671
WINC3400 - https://jira.microchip.com/browse/WSGTEST-1694

WINC Driver / Application Requirements

Software and Utility Requirements (Install the latest from Microchip Website)

- MPLAB X IDE (v 6.0 v or above)
- XC32 Compiler (v 4.10 v or above)
- MCC Plugin (v x.0 v or above, with MCC Plug in v5.1.4)

Third-party Tools

- TeraTerm for Console application
- J-Link for J-Link / J-Trace / Flasher / Debug SW from https://www.segger.com/downloads/jlink/

Hardware Requirements

- SAMA5D27-SOM1-EK1 Evaluation Kit
- MicroEbus to XPRO Adapter
- WINC1500 XPRO Board
- WiFi7 Click Board from MicroE

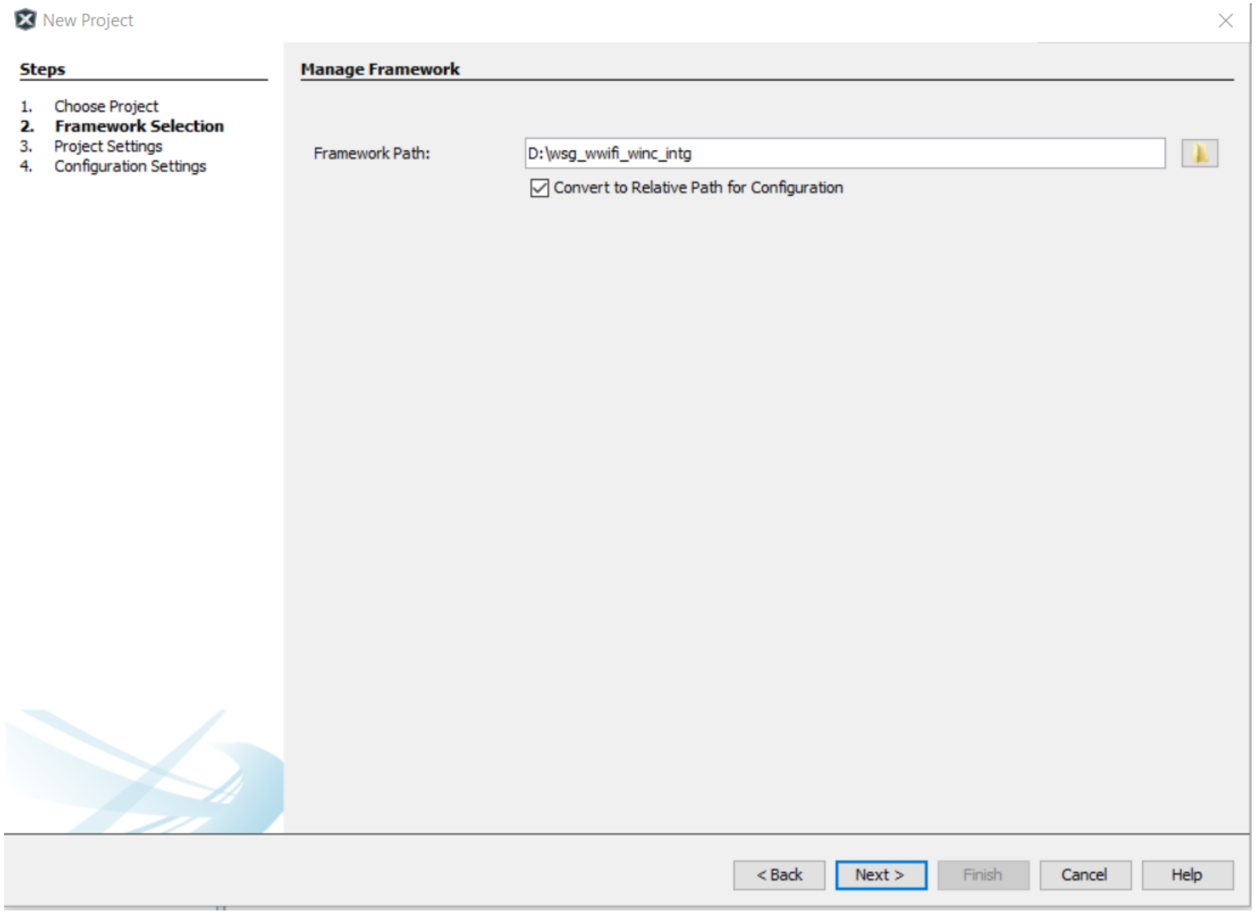
Steps For Creating Application:

1. Download / Clone the wireless_wifi repo from the Bitbucket using the following link - https://bitbucket.microchip.com/projects/WSGSW/repos/wireless_wifi/browse?at=refs%2Fheads%2Fwinc_intergration_sama5d27

   Checkout to **winc_intergration_sama5d27** branch –

   ```
   git checkout origin/winc_intergration_sama5d27 -b local_winc_intergration_sama5d27
   ```
2. Open MPLAB X IDE v6.0

3. Create New MCC MPU32 Bit Device Project with the following names and configurations:
   a. Inside Configuration → Configuration Name as → sam_a5d27_som1_winc1500
   b. Inside Firmware → Project Name as → sam_a5d27_som1_winc1500.X
   c. Device / MPU32 – ATSAMA5D27C1G
   d. Packs – SAMA5D2_DFP (1.8.9), CMSIS (5.8.0)
   e. XC32 – v4.0, MCC Core as v5.1.4



New Project

Steps

1. Choose Project
2. **Framework Selection**
3. Project Settings
4. Configuration Settings

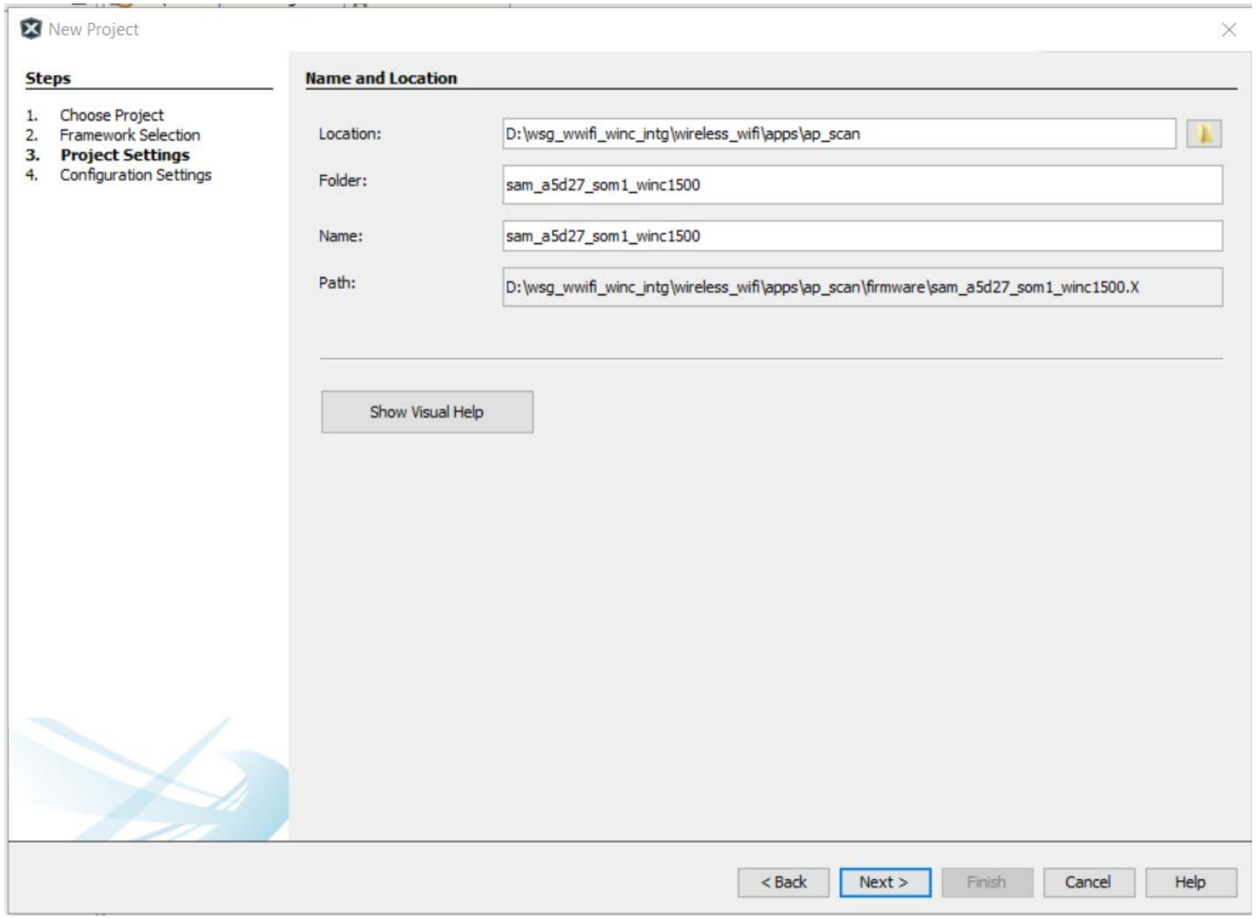
Manage Framework

Framework Path: D:\wsg_wwifi_winc_intg

☑ Convert to Relative Path for Configuration

Framework required repos

a. content_manager_artifacts
b. core
c. csp
d. dev_packs
e. Devices
f. harmony-services
g. mcc
h. mhc
i. quick_docs
j. wireless_wifi (branch - winc_integration)
k. net
l. crypto
m. paho.mqtt.embedded-c
n. wolfMQTT
o. wolfssh
p. wolfssl
q. zlib
r. wireless_apps_winc1500
s. wireless_apps_winc3400

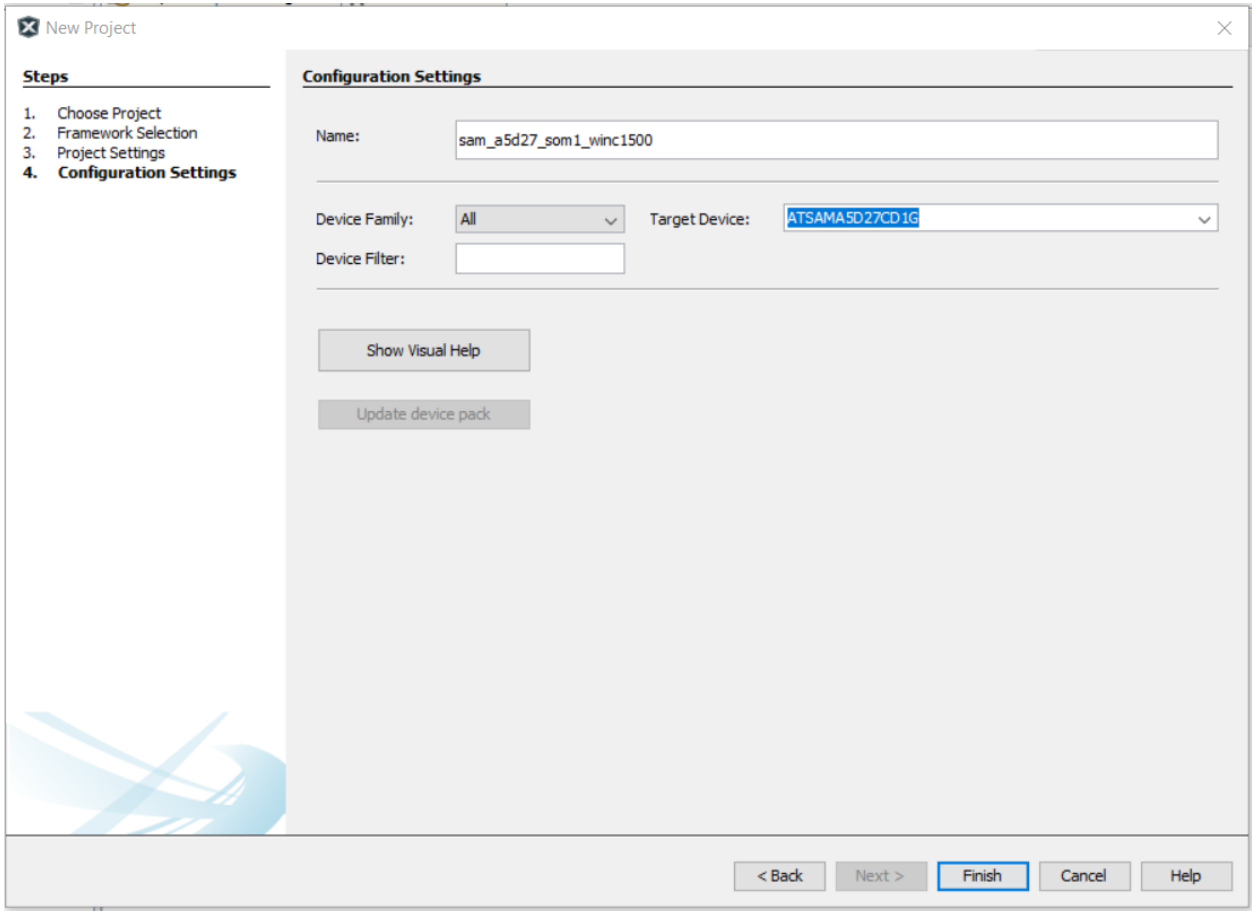


Location: D:\wsg_wwifi_winc_intg\wireless_wifi\apps\ap_scan

Folder: sam_a5d27_som1_winc1500

Name: sam_a5d27_som1_winc1500

Path: D:\wsg_wwifi_winc_intg\wireless_wifi\apps\ap_scan\firmware\sam_a5d27_som1_winc1500.X



1. Choose Project
2. Framework Selection
3. Project Settings
4. **Configuration Settings**

Configuration Settings

Name: sam_a5d27_som1_winc1500

Device Family: All

Target Device: ATSAMA5D27CD1G

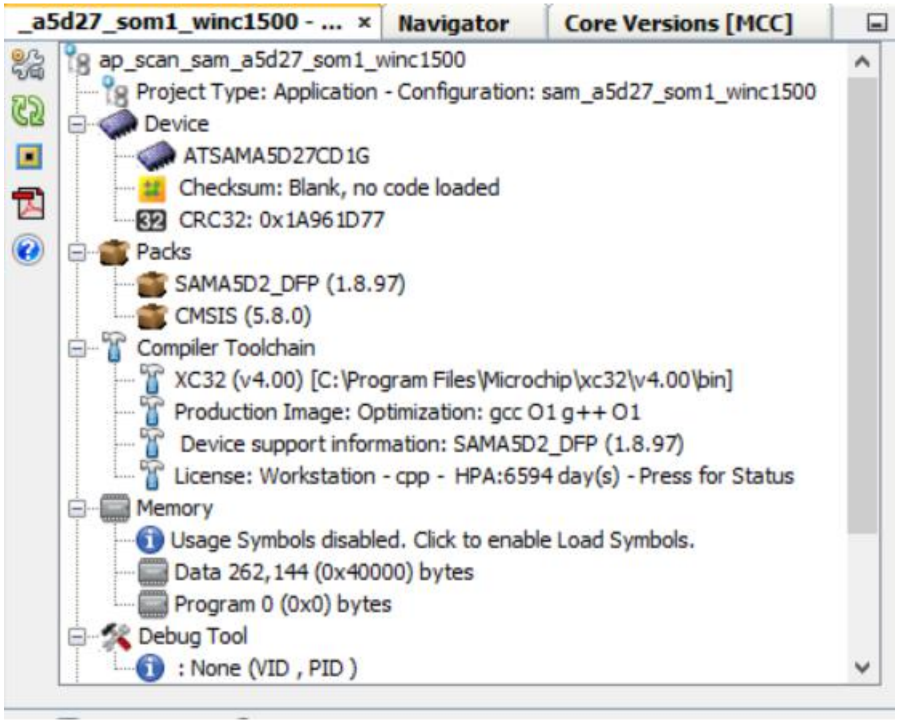
Device Filter:

f. Set the project as the Main Project

g. Rename project to desired application name inside IDE such as (for ap_scan)

- Inside MPLAB X IDE → Project Name as →ap_scan_sam_a5d27_som1_winc1500

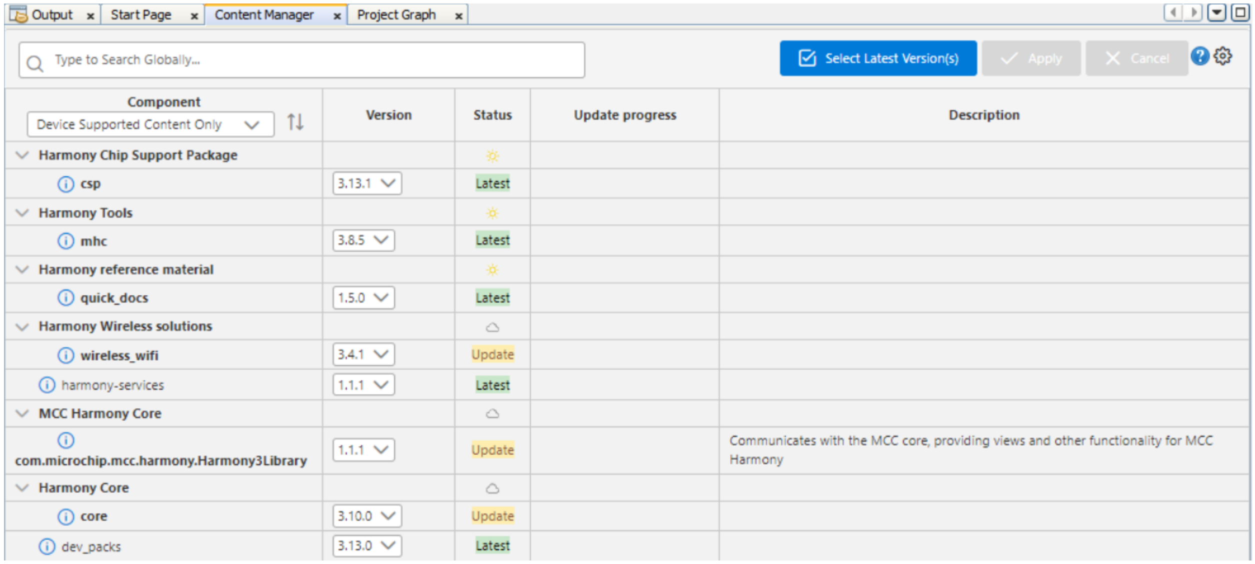
h. Check the project configurations from the Project properties



```
ap_scan_sam_a5d27_som1_winc1500
    Project Type: Application - Configuration: sam_a5d27_som1_winc1500
  Device
      ATSAMA5D27CD1G
      Checksum: Blank, no code loaded
      CRC32: 0x1A961D77
  Packs
      SAMA5D2_DFP (1.8.97)
      CMSIS (5.8.0)
  Compiler Toolchain
      XC32 (v4.00) [C:\Program Files\Microchip\xc32\v4.00\bin]
      Production Image: Optimization: gcc O1 g++ O1
      Device support information: SAMA5D2_DFP (1.8.97)
      License: Workstation - cpp - HPA:6594 day(s) - Press for Status
  Memory
      Usage Symbols disabled. Click to enable Load Symbols.
      Data 262,144 (0x40000) bytes
      Program 0 (0x0) bytes
  Debug Tool
      : None (VID , PID )
```

4. Launch MCC and download/clone the repos (Bitbucket) from the Content Manager link such as (this is apart from the Cloned wireless_wifi repo)
   - i. content_manager_artifacts
   - ii. core
   - iii. csp
   - iv. dev_packs
   - v. Devices
   - vi. harmony-services
   - vii. mcc
   - viii. mhc
   - ix. quick_docs
   - x. wireless_wifi (Checkout branch - winc_integration)

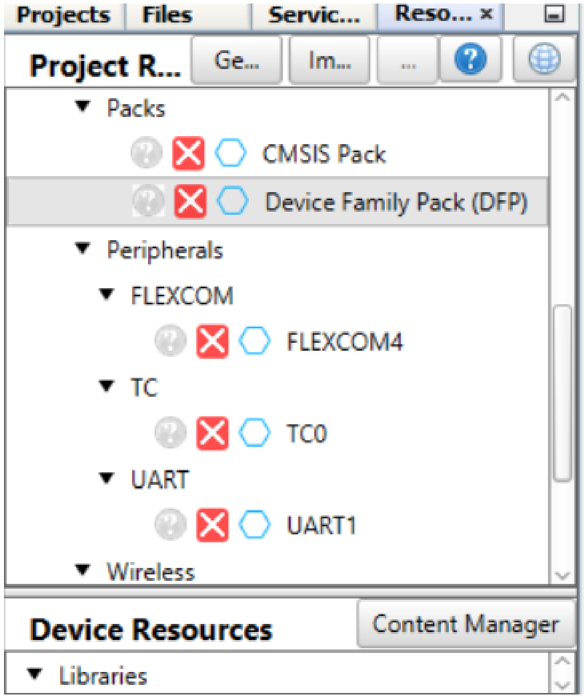
xi. net - clone
xii. crypto
xiii. paho.mqtt.embedded-c
xiv. wolfMQTT
xv. wolfssh
xvi. wolfssl
xvii. zlib
xviii. wireless_apps_winc1500
xix. wireless_apps_winc3400

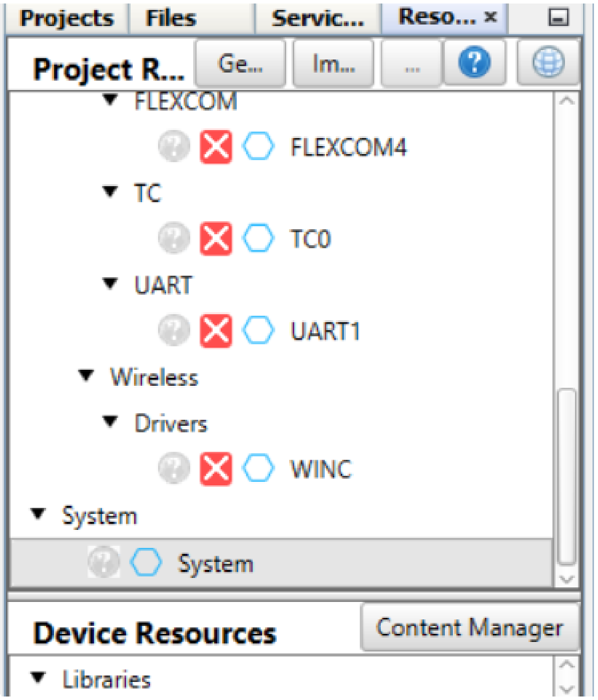


Component	Version	Status	Update progress	Description
Harmony Chip Support Package		☼		
csp	3.13.1	Latest		
Harmony Tools		☼		
mhc	3.8.5	Latest		
Harmony reference material		☼		
quick_docs	1.5.0	Latest		
Harmony Wireless solutions		☁		
wireless_wifi	3.4.1	Update		
harmony-services	1.1.1	Latest		
MCC Harmony Core		☁		
com.microchip.mcc.harmony.Harmony3Library	1.1.1	Update		Communicates with the MCC core, providing views and other functionality for MCC Harmony
Harmony Core		☁		
core	3.10.0	Update		
dev_packs	3.13.0	Latest		

5. Make sure to have all the repo based before you start adding components into the Project Graph
6. Project would usually have the DFP, CMSIS, System and Core populated
7. Start adding the Harmony components required for the Host D27 + WINC1500 Applications (from Device Resources to Project Resources)
   - WINC from Wireless
   - SPI Driver

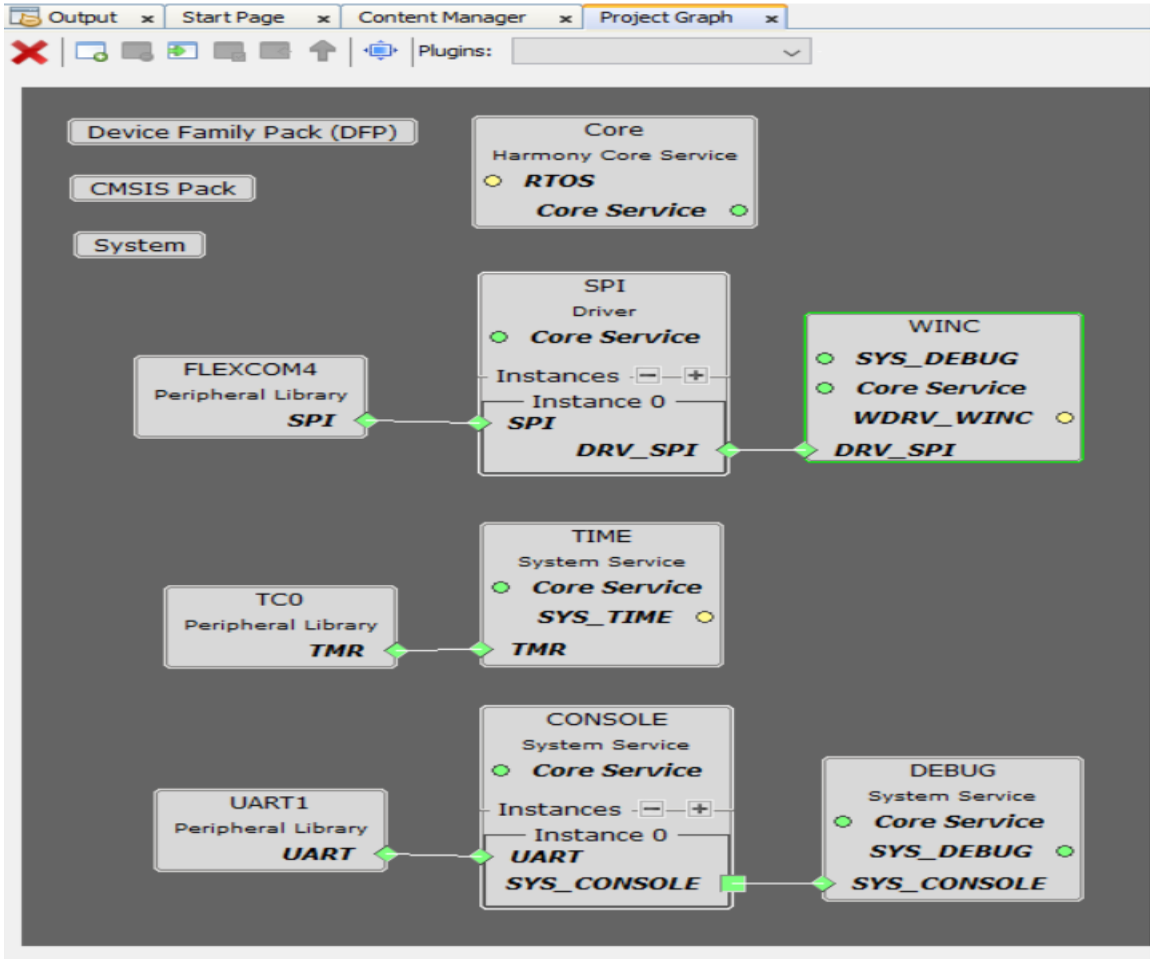
- Time, Console, Debug from System Services
- Flexcom4(SPI), TC0 and UART1 from peripherals and link the components as shown below





Adding Harmony components to the Project Graph

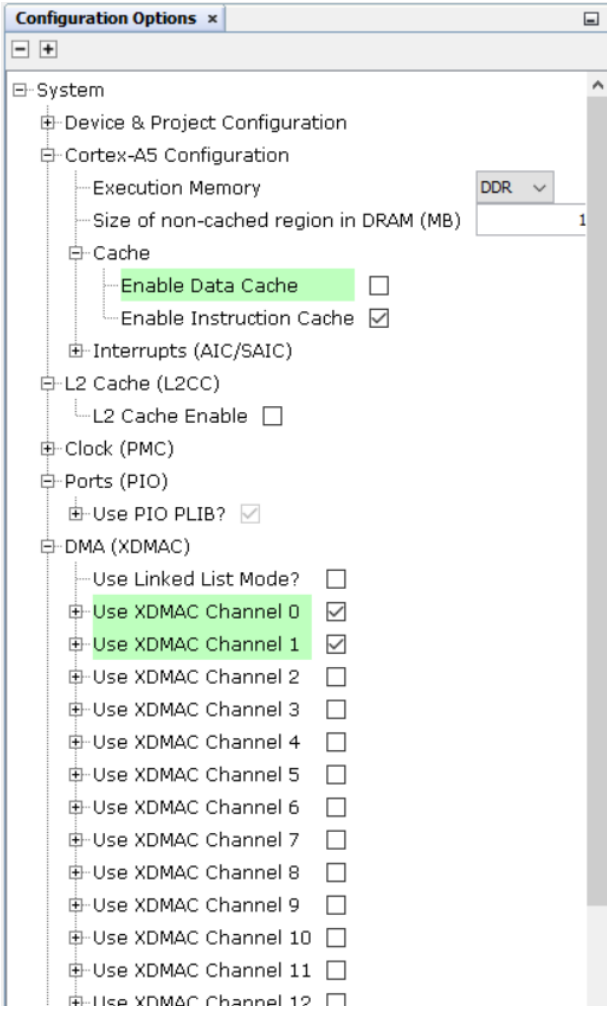
8. Add the Harmony components to the Project Graph and connect as shown below.



9. Once the components are connected, generate code (MCC based code) for a quick check.

Project / application configurations

System



Configuration Options ×

- System
  - Device & Project Configuration
  - Cortex-A5 Configuration
    - Execution Memory: DDR
    - Size of non-cached region in DRAM (MB): 1
    - Cache
      - Enable Data Cache □
      - Enable Instruction Cache ☑
    - Interrupts (AIC/SAIC)
  - L2 Cache (L2CC)
    - L2 Cache Enable □
  - Clock (PMC)
  - Ports (PIO)
    - Use PIO PLIB? ☑
  - DMA (XDMAC)
    - Use Linked List Mode? □
    - Use XDMAC Channel 0 ☑
    - Use XDMAC Channel 1 ☑
    - Use XDMAC Channel 2 □
    - Use XDMAC Channel 3 □
    - Use XDMAC Channel 4 □
    - Use XDMAC Channel 5 □
    - Use XDMAC Channel 6 □
    - Use XDMAC Channel 7 □
    - Use XDMAC Channel 8 □

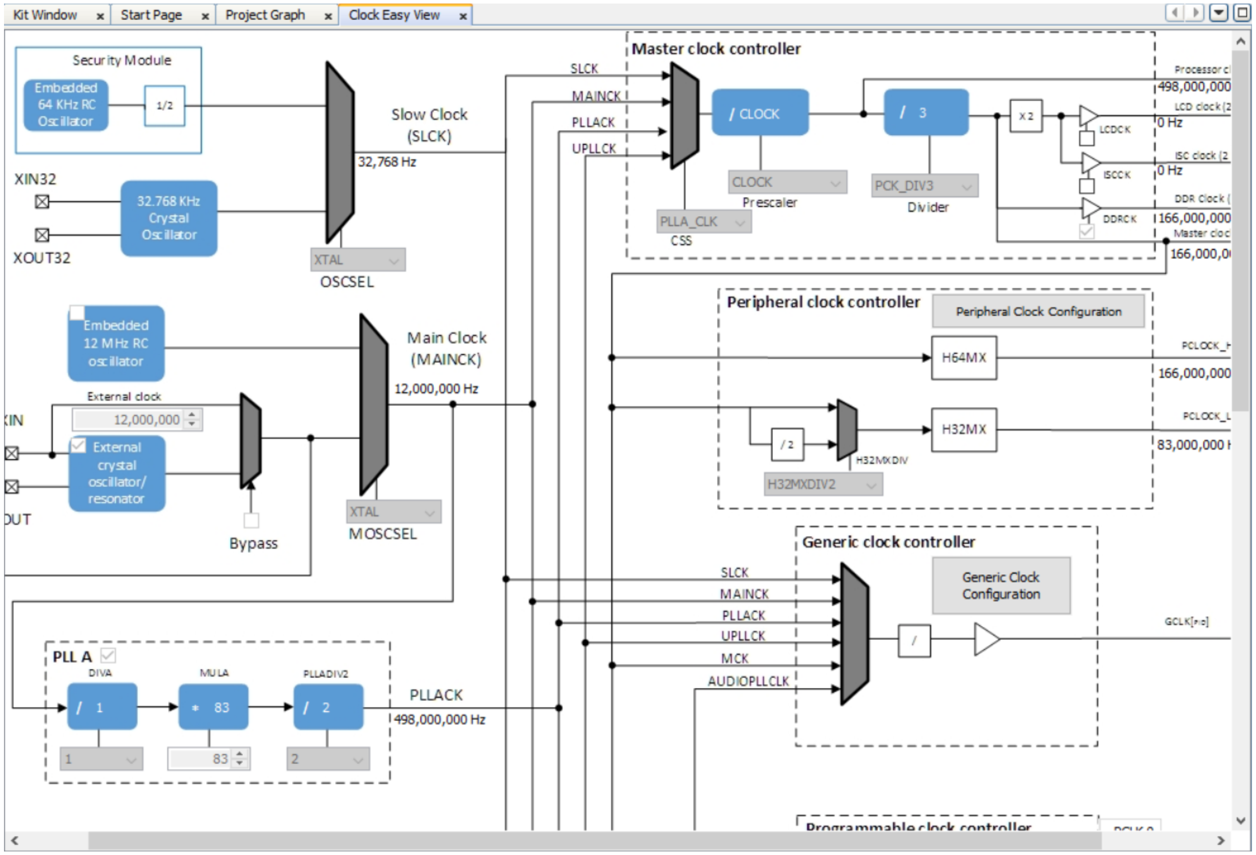
Clock Configurations

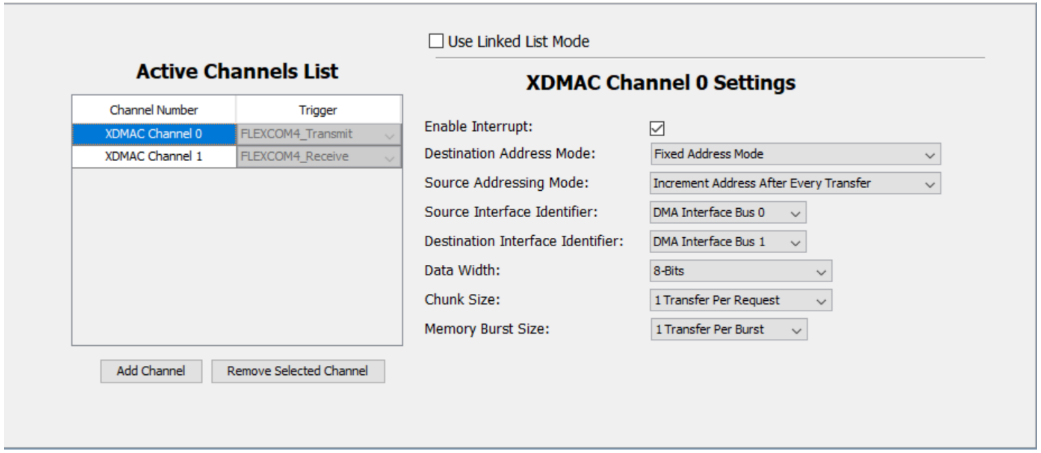


Note: Make sure to check the UART Clock Frequency for 83 MHz with source as MCK, refresh if required

PIN Configurations for WINC1500

B9 -- PC29 -- -- FLEXCOM4_IO1 -- n/a -- n/a
C7 -- PB2 -- WDRV_WINC_RESETN -- GPIO -- OUT -- HIGH
D8 -- PD2 -- -- UART1_URXD1 -- n/a -- n/a
E6 -- PC30 -- -- FLEXCOM4_IO2 -- n/a -- n/a
E7 -- PD0 -- -- FLEXCOM4_IO4 -- n/a -- n/a
F5 -- PB0 -- GPIO_PB0 -- GPIO -- IN -- n/a Falling Edge Pull-up/Yes
F6 -- PC28 -- -- FLEXCOM4_IO0 -- n/a -- n/a
J1 -- PD3 -- -- UART1_UTXD1 -- n/a -- n/a
L5 -- PD25 -- WDRV_WINC_CHIP_EN -- GPIO -- OUT – HIGH

DMA Configurations



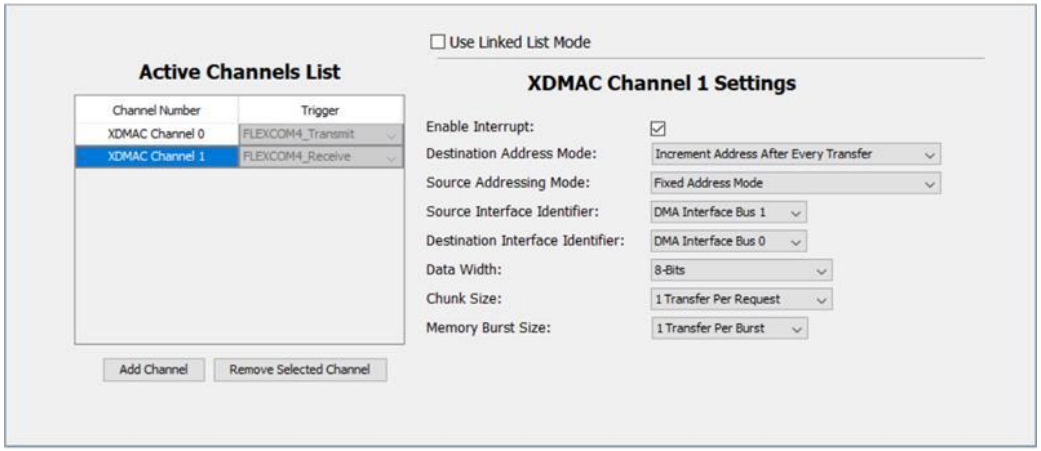
☐ Use Linked List Mode

Active Channels List

Channel Number	Trigger
XDMAC Channel 0	FLEXCOM4_Transmit
XDMAC Channel 1	FLEXCOM4_Receive

XDMAC Channel 0 Settings

Enable Interrupt: ☑
Destination Address Mode: Fixed Address Mode
Source Addressing Mode: Increment Address After Every Transfer
Source Interface Identifier: DMA Interface Bus 0
Destination Interface Identifier: DMA Interface Bus 1
Data Width: 8-Bits
Chunk Size: 1 Transfer Per Request
Memory Burst Size: 1 Transfer Per Burst



☐ Use Linked List Mode

Active Channels List

Channel Number	Trigger
XDMAC Channel 0	FLEXCOM4_Transmit
XDMAC Channel 1	FLEXCOM4_Receive

XDMAC Channel 1 Settings

Enable Interrupt: ☑
Destination Address Mode: Increment Address After Every Transfer
Source Addressing Mode: Fixed Address Mode
Source Interface Identifier: DMA Interface Bus 1
Destination Interface Identifier: DMA Interface Bus 0
Data Width: 8-Bits
Chunk Size: 1 Transfer Per Request
Memory Burst Size: 1 Transfer Per Burst

AIC Configuration

Interrupt Vector	Enable	Handler Name	Map Type	Source Type	Priortiy
XDMAC0_IRQn - DMA Controller 0	Yes	XDMAC0_InterruptHandler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum
XDMAC1_IRQn - DMA Controller 1	No	XDMAC1_Handler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum
FLEXCOM4_IRQn – FLEXCOM4	Yes	FLEXCOM4_InterruptHandler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum
UART1_IRQn – UART1	Yes	UART1_InterruptHandler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum
TC0_IRQn – Timer Counter 0 (ch. 0,1,2)	Yes	TC0_ InterruptHandler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum
PIOB_IRQn – Parallel I/O Controller	Yes	PIOB_InterruptHandler	Nonsecure	HL Sensitive/Internal LL Sensitive/External	Minimum

10. Once the required configuration changes are done, Generate the code
11. Now Clean and Build the project
12. The project should build successfully, for any errors/warning – resolve the same and proceed further
13. This would just work for the WINC Driver Initialization, and this needs to be monitored with the SAMA5D27-SOM1-EK1 Evaluation Board
14. **Connecting and checking on SAMA5D27-SOM1-EK1 Evaluation Kit**
    1. For linking the HW SAMA5D27-SOM1-EK1 Board along with the WINC Module on the XPRO Board connected through the XPRO Adapter
    2. Copy the at91bootstrap_sam_a5d27_som1_ek.X project at the location …..\wireless_wifi\apps\ap_scan\firmware
    3. Install JLink Program / Debug utility from Segger (https://www.segger.com/downloads/jlink/) for SOM1-Ek1 board JLink Debugger / Programmer
    4. Connect J10 / JLink on SOM1-EK1 Board and the PC COM Port using the MicroUSB Cable
    5. USB connection powers up the board
    6. Once the SAMA5D27-SOM1-EK1 Board is detected, note down the SUB connected COM Port to use the Console Application using the TeraTerm
    7. Connect the WINC1500 XPRO Board to the SAMA5D27-SOM1-EK1 using the XPRO Adapter

Connection Details of SAM1_EK1 Board to 1500/3400 Module

SOM1_EK1 Board			**WINC1500 Module**		
J24 Mbus1 Header Pins	**Signal name on Mbus**	**SAMA5D27 (For our Ref.)**	**XPRO Header EXT1 Pins**	**Signal name on Module**	**Signal Type**
1	AN	PD25	10	CHIP_EN	Active High
2	RST	PB2	5	RESET_N	Active Low
3	CS	PD0	15	SPI_SSN	Active Low
4	SPCK	PC30	18	SPI_SCK	SPI Clock
5	MISO	PC29	17	SPI_MISO	
6	MOSI	PC28	16	SPI_MOSI	
7	+3.3V		20	+3.3V	
8	GND		19	GND	

SOM1_EK1 Board			WINC1500 Module		
J25 Mbus1 Header	Pin Name on Mbus	SAMA5D27 (For our Ref.)	XPRO Header EXT1 Pins	Signal name on Module	Signal Type
1	PWM			NC	
2	INT (INT_IN)	PB0	9	IRQN (INT_OUT)	Active Low
3	RX			NC	
4	TX			NC	
5	TWCK			NC	
6	TWD			NC	
7	+5.0V			NC	
8	GND			NC	

15. Make the below Changes in the generated code of the PIO to support the PIO Interrupt Handler
    Make the following changes @:

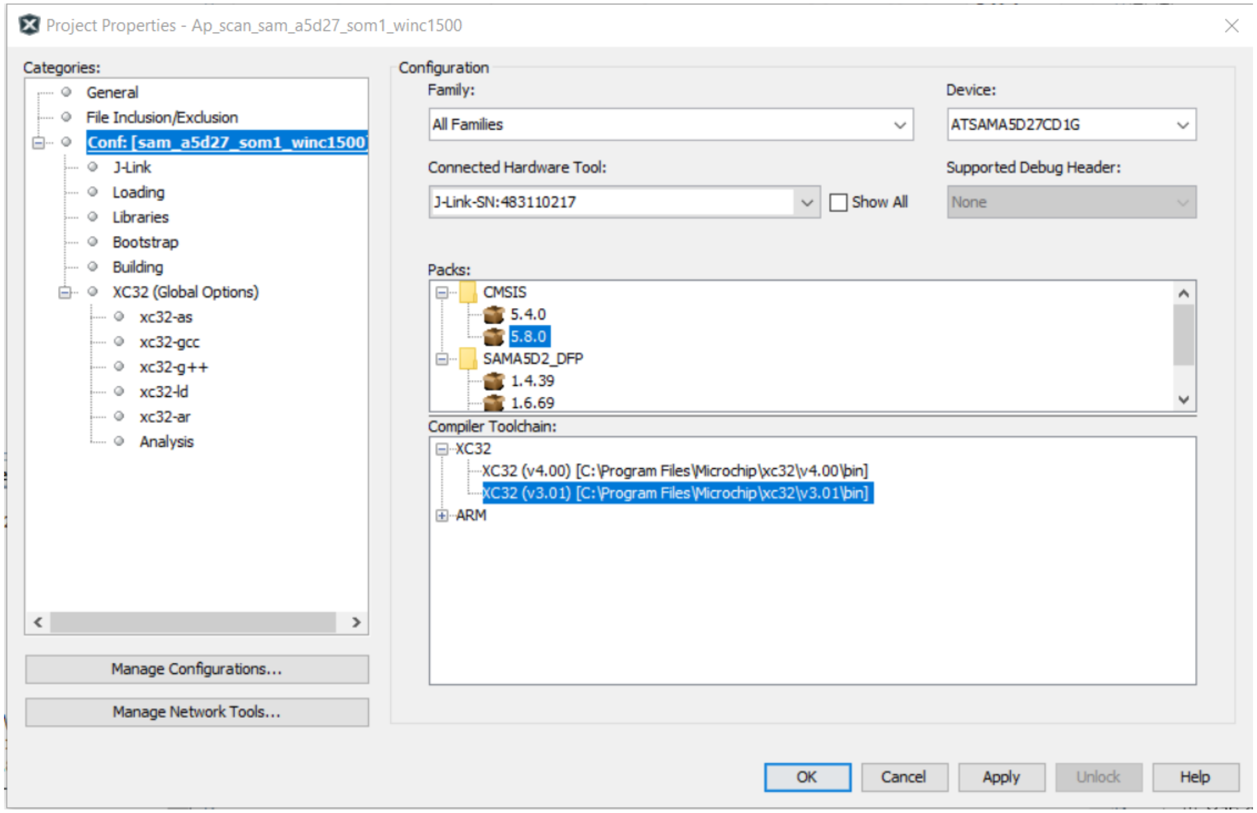
    plib_pio.h

    ```
            typedef  void (*PIO_PIN_CALLBACK) (uintptr_t context);
    ```

    plib_pio.c

    ```
    if((status & ( 1 << (portPinCbObj[j].pin & 0x1F) ) ) && (portPinCbObj[j].callback != NULL))
                            {
                                    portPinCbObj[j].callback ( portPinCbObj[j].context );
                            }
    ```

16. Power up the board using the USB cable through the J10 / JLink connector



Project Properties - Ap_scan_sam_a5d27_som1_winc1500

Family: All Families

Device: ATSAMA5D27CD1G

Connected Hardware Tool: J-Link-SN:483110217 □ Show All

Supported Debug Header: None

Packs:

- CMSIS
  - 5.4.0
  - 5.8.0
- SAMA5D2_DFP
  - 1.4.39
  - 1.6.69

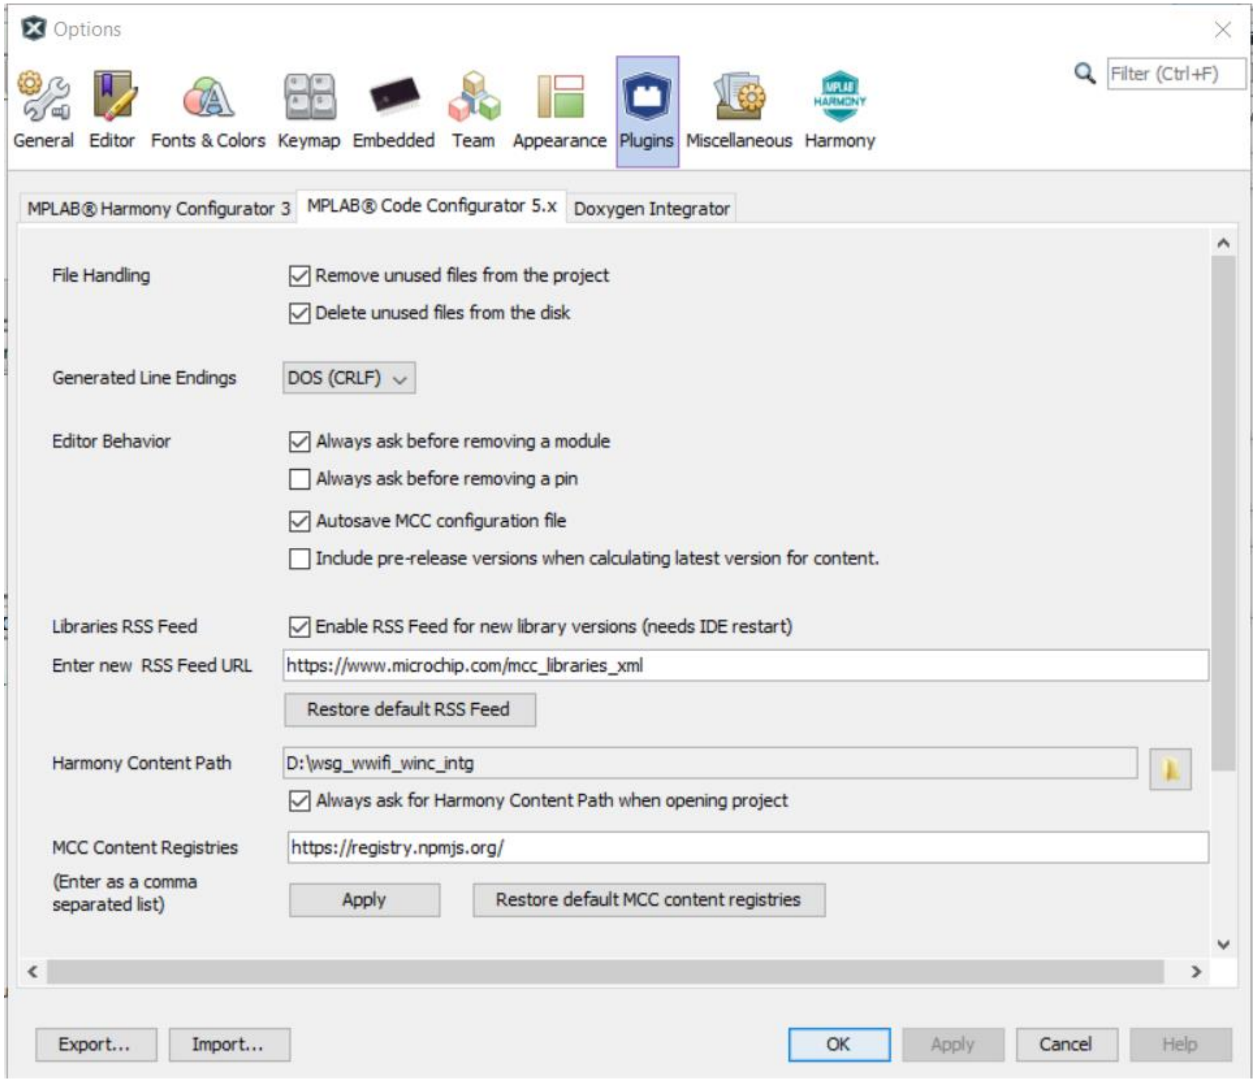
Compiler Toolchain:

- XC32
  - XC32 (v4.00) [C:\Program Files\Microchip\xc32\v4.00\bin]
  - XC32 (v3.01) [C:\Program Files\Microchip\xc32\v3.01\bin]
- ARM

Note: The JLink Section appears in the Category list, and shows up as a connected HW tool with the serial number

17. Re-Generate the code for bootstrap link to compile
18. AT MPLAB X IDE Tools → Options list check for the Repo base selection

19. For MCC



File Handling

☑ Remove unused files from the project

☑ Delete unused files from the disk

Generated Line Endings: DOS (CRLF)

Editor Behavior

☑ Always ask before removing a module

□ Always ask before removing a pin

☑ Autosave MCC configuration file

□ Include pre-release versions when calculating latest version for content.

Libraries RSS Feed

☑ Enable RSS Feed for new library versions (needs IDE restart)

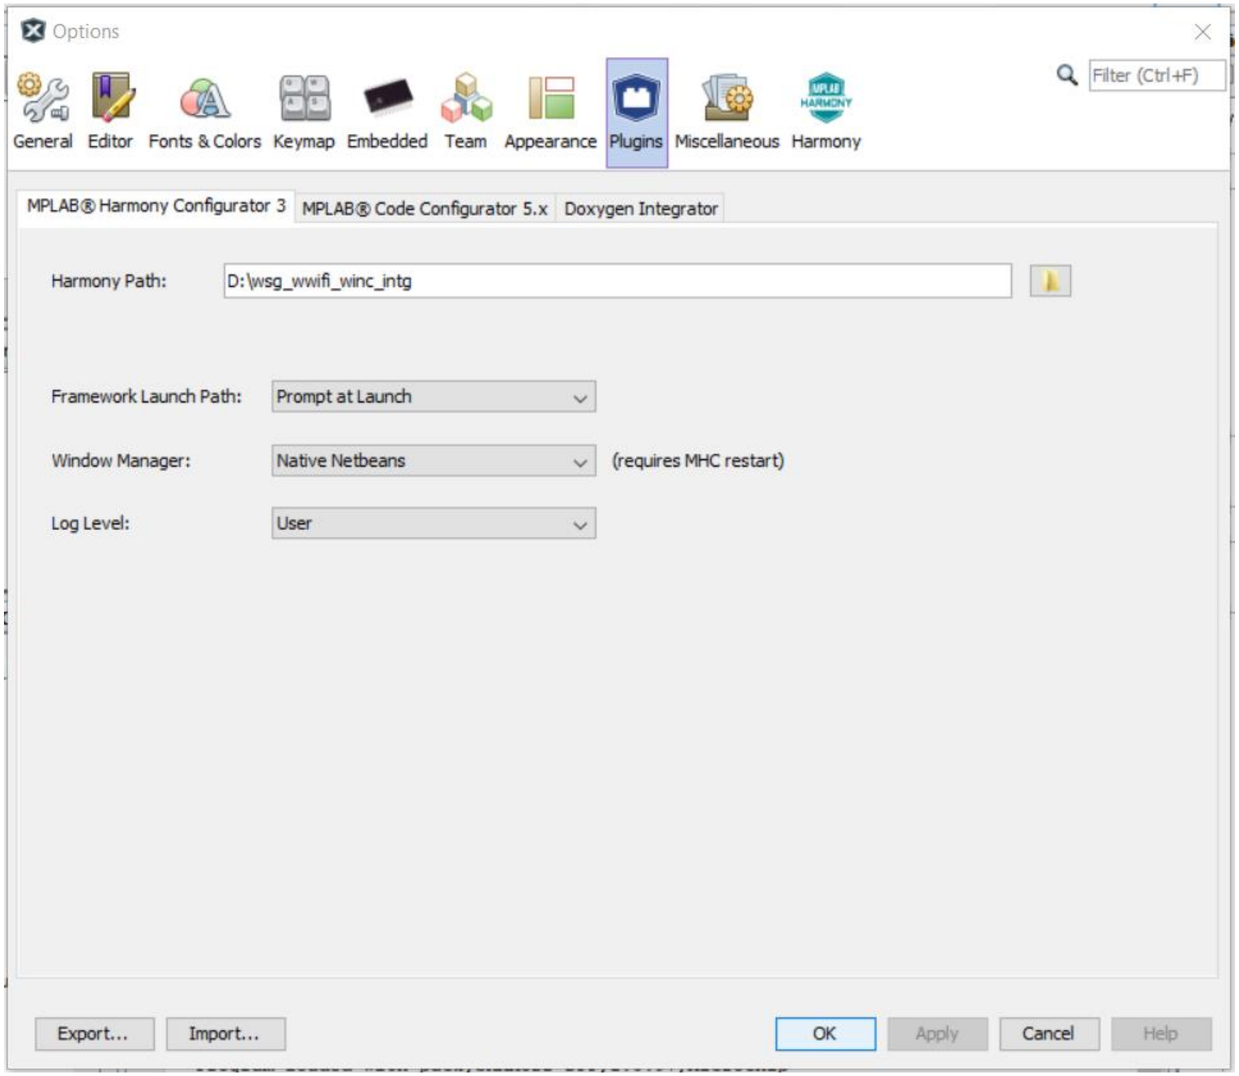
Enter new RSS Feed URL: https://www.microchip.com/mcc_libraries_xml

Harmony Content Path: D:\wsg_wwifi_winc_intg

☑ Always ask for Harmony Content Path when opening project

MCC Content Registries (Enter as a comma separated list): https://registry.npmjs.org/

20. For MHC



Harmony Path: D:\wsg_wwifi_winc_intg

Framework Launch Path: Prompt at Launch

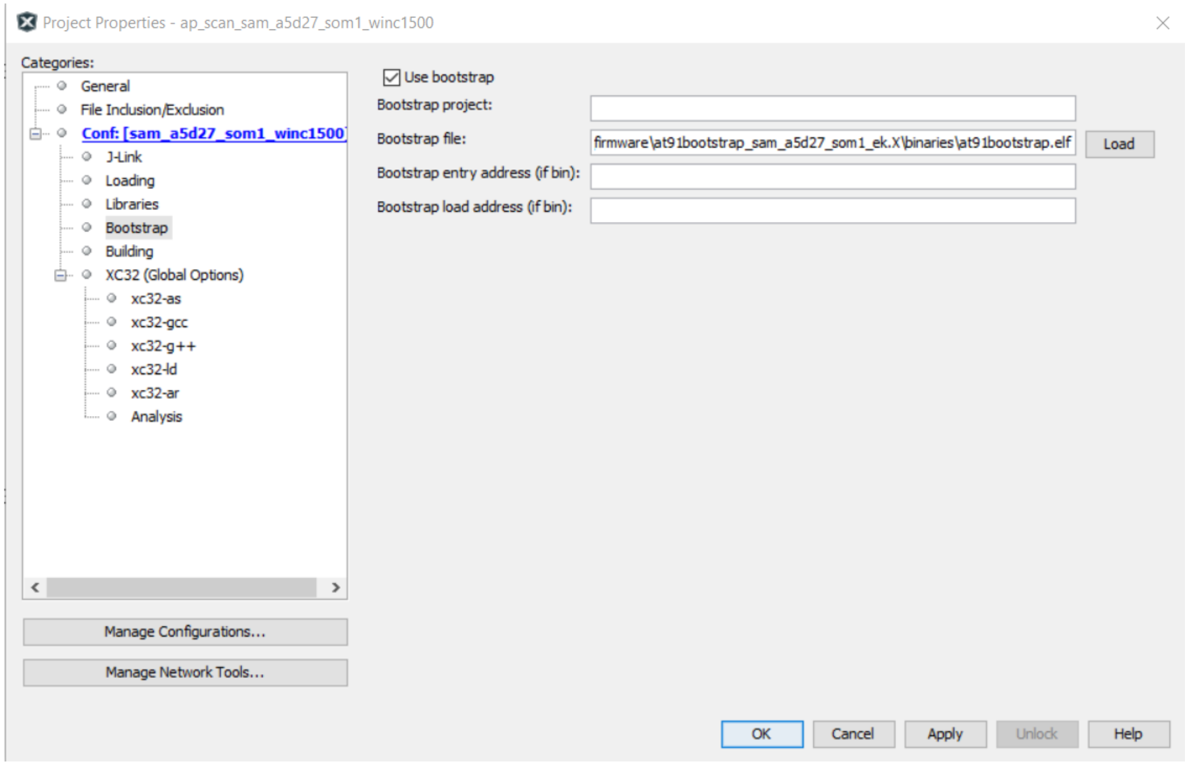
Window Manager: Native Netbeans (requires MHC restart)

Log Level: User

21. Check the following files in the below path.
....\wireless_wifi\apps\ap_scan\firmware\at91bootstrap_sam_a5d27_som1_ek.X\binaries

- at91bootstrap.elf
- boot.bin

22. Link the bootstrap to the elf to the project for JLink support



☑ Use bootstrap

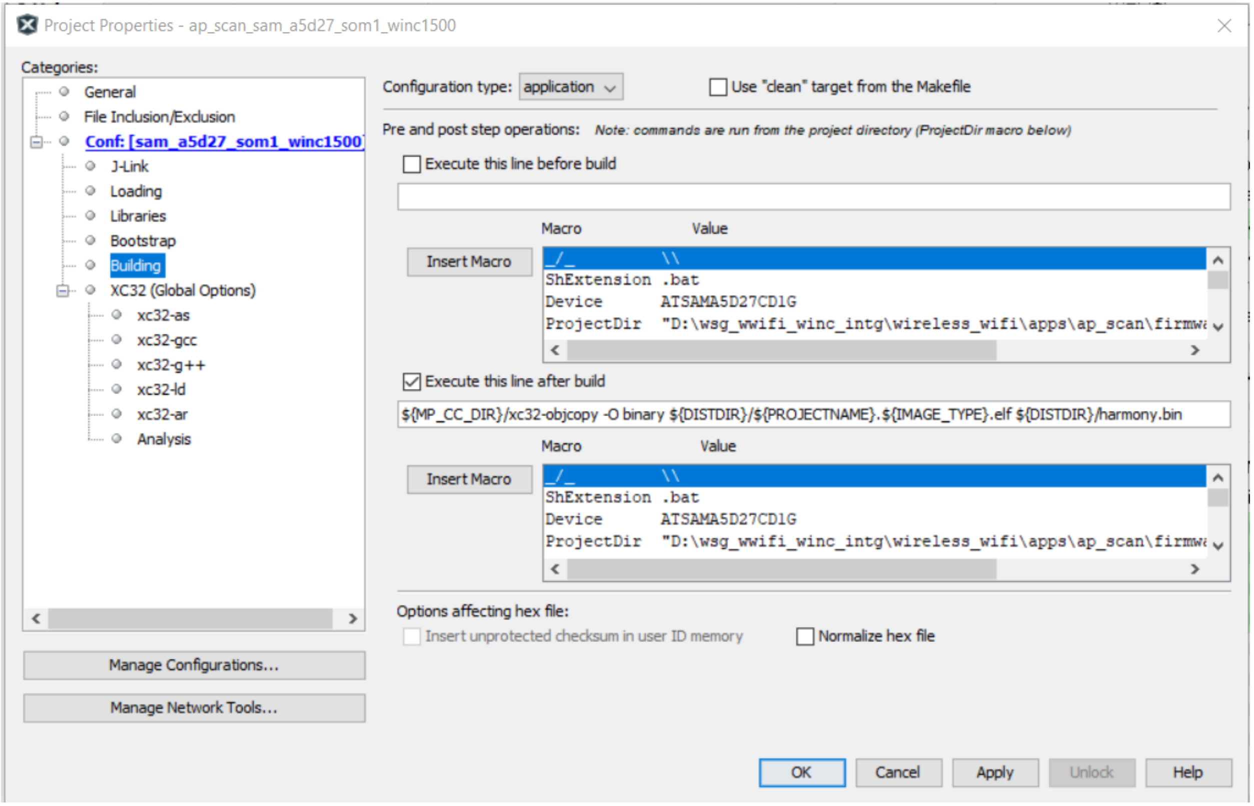
Bootstrap project:

Bootstrap file: firmware\at91bootstrap_sam_a5d27_som1_ek.X\binaries\at91bootstrap.elf

Bootstrap entry address (if bin):

Bootstrap load address (if bin):

23. Generate the harmony.bin from the following Building Category from the Project Properties



Configuration type: application

□ Use "clean" target from the Makefile

Pre and post step operations: *Note: commands are run from the project directory (ProjectDir macro below)*

□ Execute this line before build

```
Macro       Value
_/_         \\
ShExtension .bat
Device      ATSAMA5D27CD1G
ProjectDir  "D:\wsg_wwifi_winc_intg\wireless_wifi\apps\ap_scan\firmwa
```

☑ Execute this line after build

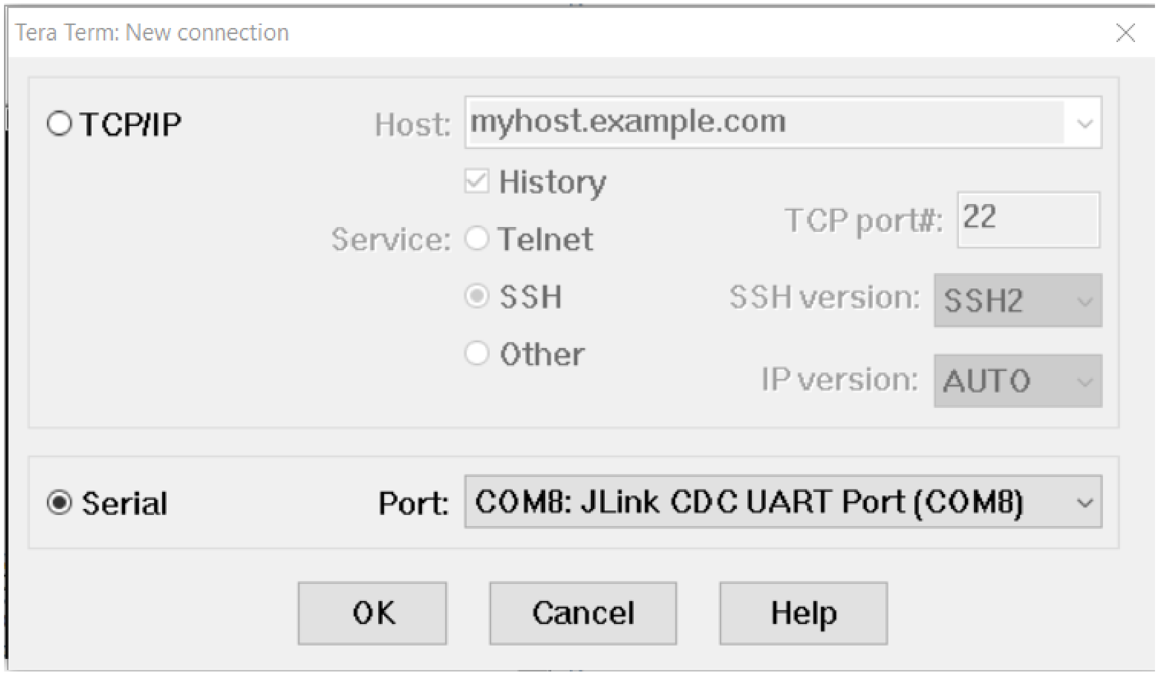
```
${MP_CC_DIR}/xc32-objcopy -O binary ${DISTDIR}/${PROJECTNAME}.${IMAGE_TYPE}.elf ${DISTDIR}/harmony.bin
```

```
Macro       Value
_/_         \\
ShExtension .bat
Device      ATSAMA5D27CD1G
ProjectDir  "D:\wsg_wwifi_winc_intg\wireless_wifi\apps\ap_scan\firmwa
```

Options affecting hex file:

□ Insert unprotected checksum in user ID memory □ Normalize hex file

24. Once the tool is set, generate the project, and do a clean build
25. Open Teraterm with the following COM Port settings:



Tera Term: New connection

○ TCP/IP — Host: myhost.example.com

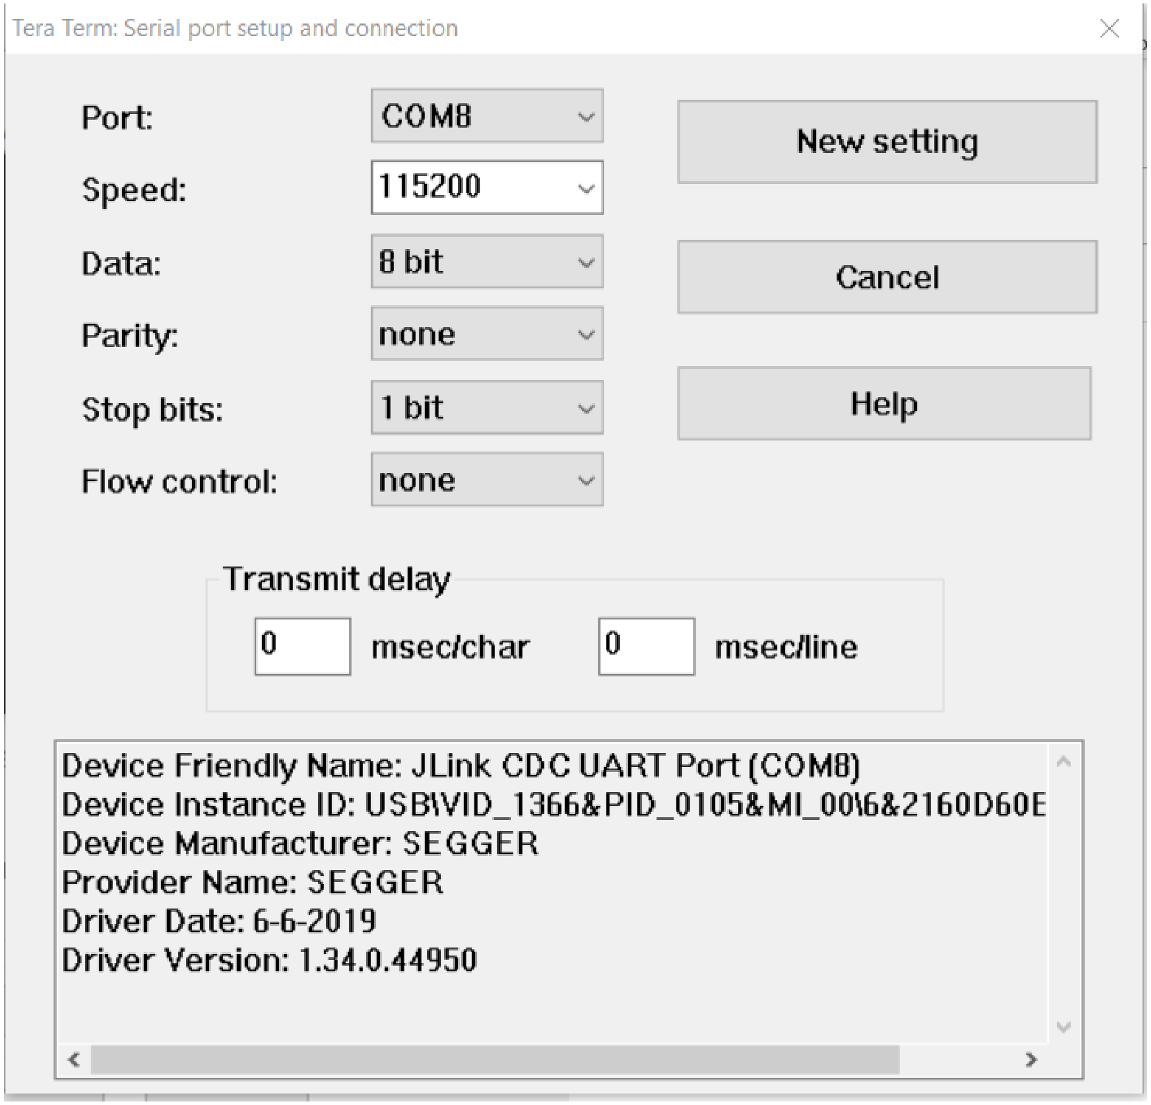
☑ History

Service: ○ Telnet — TCP port#: 22

● SSH — SSH version: SSH2

○ Other — IP version: AUTO

● Serial — Port: COM8: JLink CDC UART Port (COM8)



Tera Term: Serial port setup and connection

Port: COM8

Speed: 115200

Data: 8 bit

Parity: none

Stop bits: 1 bit

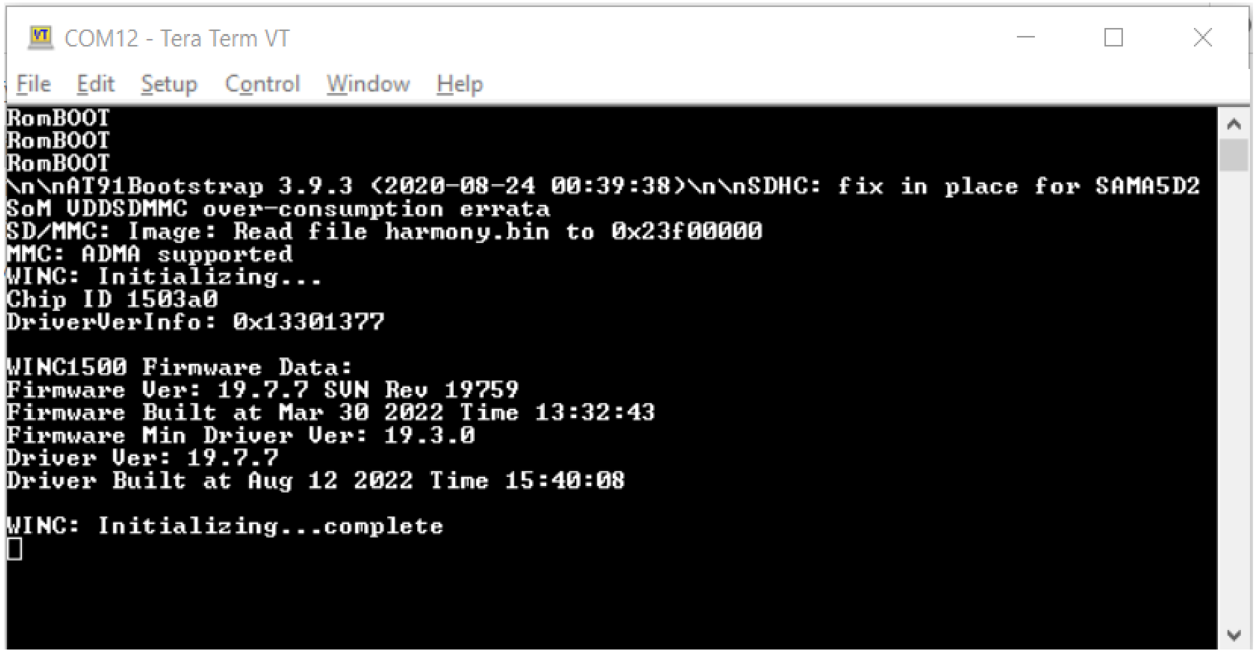
Flow control: none

Transmit delay

0 msec/char 0 msec/line

Device Friendly Name: JLink CDC UART Port (COM8)
Device Instance ID: USB\VID_1366&PID_0105&MI_00\6&2160D60E
Device Manufacturer: SEGGER
Provider Name: SEGGER
Driver Date: 6-6-2019
Driver Version: 1.34.0.44950

26. Now Debug / Run Main Project (application project) from the MPLAB X IDE
27. Note the logs on the UART Console through the TeraTerm Application



```
RomBOOT
RomBOOT
RomBOOT
\n\nAT91Bootstrap 3.9.3 (2020-08-24 00:39:38)\n\nSDHC: fix in place for SAMA5D2

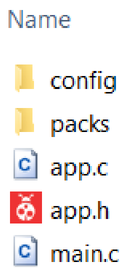
```

28. For WINC Driver Init the default source code generated along with important files used for execution are at the location (for check-ins):

a. ap_scan(for WINC DRV INIT)/firmware/src
   - config folder
   - packs folder
   - app.c
   - app.h
   - main.c
   - example.c

….. \wireless_wifi\apps\ap_scan (for WINC DRV INIT)\firmware\src (folder snap below)



Name

- config
- packs
- app.c
- app.h
- main.c

b. ap_scan(for WINC DRV INIT)/firmware/ sam_a5d27_som1_winc1500.X/nbproject/

   1. configurations.xml
   2. project.xml

c. ap_scan(for WINC DRV INIT)/firmware/ sam_a5d27_som1_winc1500.X/

   3. Makefile

d. ap_scan(for WINC DRV INIT)/firmware/at91bootstrap_sam_a5d27_som1_ek.X

Note: WINC Driver Init is completed which the initial steps before putting up an example code for ap_scan

Porting Applications with WINC Driver Init Code

AP_SCAN application

For AP_SCAN application - ap_scan/firmware/

1. Replace the following src files / add them to the src folder – app.c, app.h, main.c, example.c

a. /firmware/src

i. config folder
ii. packs folder
iii. app.c
iv. app.h
v. main.c
vi. example.c

b. /firmware/ sam_a5d27_som1_winc1500.X/nbproject/

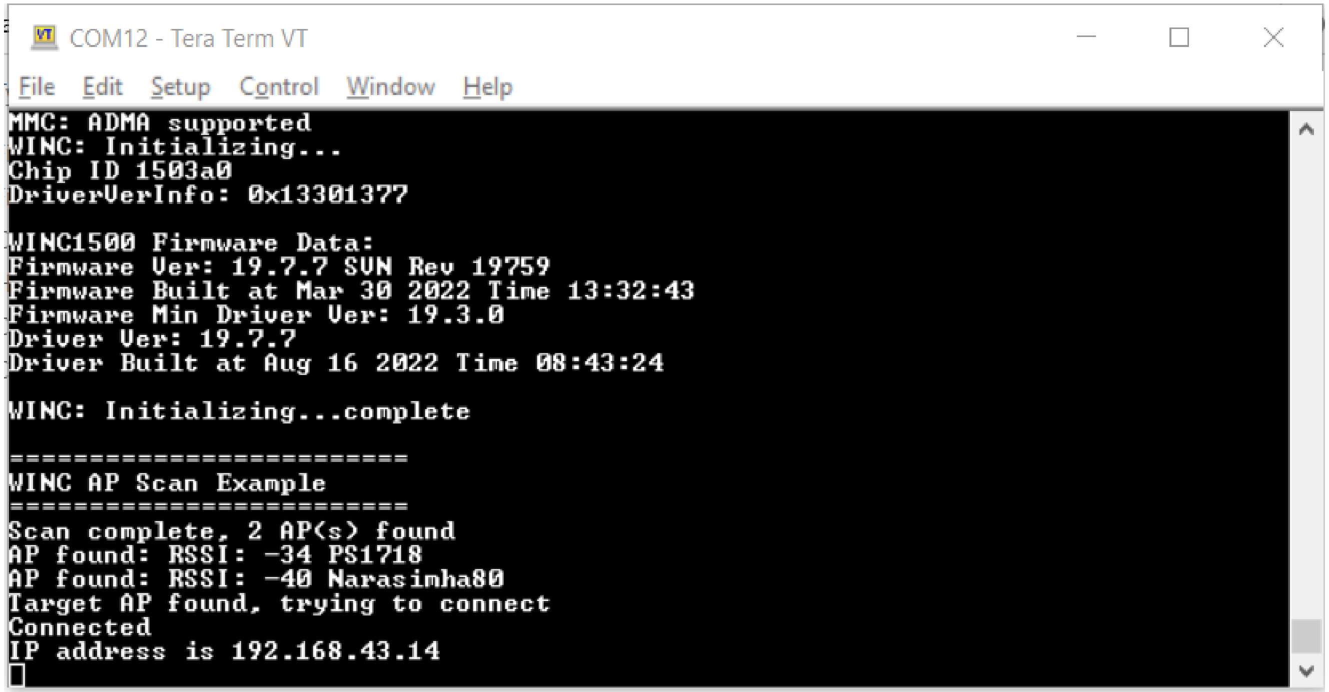
i. configurations.xml
ii. project.xml

c. /firmware/ sam_a5d27_som1_winc1500.X/

i. Makefile

d. /firmware/at91bootstrap_sam_a5d27_som1_ek.X

Output Screen shows up as follows:



```
MMC: ADMA supported
WINC: Initializing...
Chip ID 1503a0
DriverVerInfo: 0x13301377

WINC1500 Firmware Data:
Firmware Ver: 19.7.7 SVN Rev 19759
Firmware Built at Mar 30 2022 Time 13:32:43
Firmware Min Driver Ver: 19.3.0
Driver Ver: 19.7.7
Driver Built at Aug 16 2022 Time 08:43:24

WINC: Initializing...complete

=========================
WINC AP Scan Example
=========================
Scan complete, 2 AP(s) found
AP found: RSSI: -34 PS1718
